reflecta **x6-Touchscan** with TouchScreen

Macwelt
Gut
08/11

The **reflecta x6-TouchScan** with a **9 megapixel** resolution (2400 dpi) is a **PC independent scanner** which allows you to digitise slides, negatives and pocket films (110 mm). It offers a 2.8" touch screen display for easy and simple operation. This stand-alone scanner can be operated with a lithium-ion battery or via the AC adapter. You can view the digitised images directly on the display and store the data to an SD/SDHC card. The data are transferred from the SD/SDHC card to the PC via the delivered USB cable. The brightness and colour correction can be quickly adjusted by button on the display. The included software is a mere image editing program.
